# THE TEXTILE AUXILIARIES

are specially used for washing and dyeing of yarns and fabrics. These auxiliaries are formulated for textile products in the forms of cationic, non-ionic, surfactants and amphoteric. These auxiliaries find usage in textile industries for dyeing, finishing, printing and sizing fabric applications

## PRE - TREATMENT AUXILIARIES

It is the process known as the “Heart of Processing”. In this process all impurities are removed and substrate is brought to a stage where it is more absorbent and white and can be easily proceed further.

## DYEING AUXILIARIES

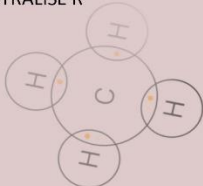

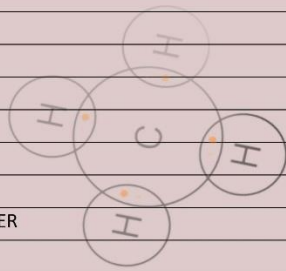

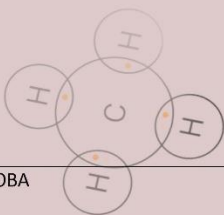

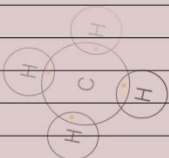

It is the process by which transfer of dyes from aqueous solution to the substrate by means of adsorption and diffusion.

## FINISHING AUXILIARIES

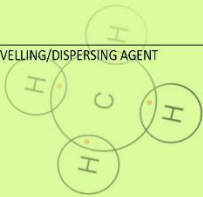

This is the final process given to the substrate to give good “Hand Feel” and some desired functional properties.

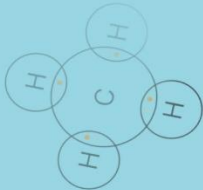

## PRINTING AUXILIARIES

It is the process of applying colour to the substrate in definite patterns or designs.
